LEARNING TARGETS FOR TODAY

• I can summarize the difference between traditional grading and standards based grading

• I can explain the “Why” behind standards-based grading

• I can distinguish between a 4, 3, 2, and 1

• I can identify ways to support my child’s learning through standards based grading
A Work in Progress and A Very Strange Year
BIG MISSION

Why are we doing this???
One teacher (Ms. Wilson) says...

“I get to have a unique perspective this year because I teach both sixth and eighth grade math.

With eighth grade, scoring assignments feels more subjective -- how much did they complete, how much did they get right/wrong, what mistakes did they make. Also, we always think about who each individual student IS and what parts of an assignment need to be modified in some way and whether it is more fair to adjust a grade to account for one of a number of things.

Grading in sixth grade feels a lot more objective and authentic this year. Say I need to know if a student can multiply fractions. I give them a few opportunities to multiply fractions. Can they do it? Either they do or they don't. If they know how to multiply fractions, that’s a 3. If they know how to multiply fractions and check the multiplication by converting to decimals and multiplying those and also show the product using a model, that’s a 4. If they don’t multiply fractions in one question on assignment, I look for evidence in a different part of the task. If they need a refresher on multiplying fractions, they get that, along with another opportunity to meet the standard.”
What Does 4, 3, 2, 1 Mean?

How to read an SBG assignment

Video by K. Davis
Our Hopes and Dreams...

• More kid and parent education about SBG

• Learning target coherence and unit transparency

• Redos and make ups

• Half-point policies

• Synthesis of SBG and SLCs/Portfolio Assessment
